Open Liberty Helm Chart

Introduction

Open Liberty provides developers with proven Java EE 7 technology and the latest Eclipse MicroProfile™ capabilities for building microservices. Building cloud-native apps and microservices has never been more efficient, since you only have to run what you need. Our goal is to give you just enough to get the job done without getting in your way.

Resources Required

System resources

- CPU Requested : 500m (500 millicpu)
- Memory Requested : 512Mi (~ 537 MB)

Storage

A persistent volume is required, if you plan on using the transaction service within Liberty. The `server.xml` Liberty configuration file must be configured to place the transaction log on this volume so that it persists, if the server fails and restarts.

Configure
